Explanations of the examination and approval procedure for two-storey stands

To ensure the safety of public traffic on the exhibition site, the construction and operation of two-storey exhibition stands or superstructures may be approved only subject to the examination, construction supervision and acceptance inspection by the construction inspection department.

For this task the ordering party (organizer) makes use of the expert assistance of the construction inspection department.

The construction inspection department will calculate the inspection fees in accordance with the City of Hamburg's Building Fees Ordinance (BauGebO) and invoice the exhibitor, as the party ordering, directly.

All fees for the approval procedure are payable by the ordering party and/or the stand construction firm acting on his behalf. The construction inspection department shall be exempt from any liabilities.

Approval of a stand shall be left to the discretion of the organizer. If the approval is refused, the ordering party is still liable to pay the charges for the examination and approval procedure.

When planning and installing glass constructions, please ask the Hamburg Messe and Congress GmbH for a copy of our leaflet "Using glass in stand constructions".
